Dr. Jamison offers dental exams, cleanings, periodontal (gum) therapy, teeth whitening, bonding, veneers, dentures, partials, extractions, root canals, implant restorations and crowns and bridges. She also provides advanced oral cancer screenings with a new technology called Identafi 3000 that detects oral cancer at its earliest and most treatable stage.

Dr. Jamison is using advanced digital radiography in place of traditional x-rays in her practice to improve diagnosis and treatment for patients. Digital radiography displays images instantly on a computer screen, which minimizes the time patients wait for results and reduces exposure to radiation.
